Bivalve and gastropod samples were collected from both the inner and outer area of the Bay of Biscay during the period from June to October 2014. The goal of this study was to determine whether contaminated sites are more influenced by anthropogenic sources than by natural pollution. The frequency and the contribution of each of the toxicants were assessed by calculating the toxicity equivalents (TEQs) of polychlorinated biphenyls (PCBs) and organochlorine pesticides (OCPs). The results obtained for each of the two groups of toxicants were statistically compared by using the Fisher's exact test (p a1d647c40b)
