Although the brain is the primary site of Alzheimer's disease (AD) pathology, there are significant cognitive and functional deficits before dementia develops. These deficits are not completely explained by the presence of AD pathology. To understand the spectrum of cognitive and functional deficits in AD, there has been a concerted effort to identify normal developmental processes that are impacted by the presence of AD pathology. We review some of these normal developmental processes and investigate how they may

Influence of an artemisinin derivative, artemether, on human luteal function. Artemisinin derivatives are effective antiparasitic drugs against acute malaria. Artemether, a semisynthetic derivative of artemisinin, is widely used for treatment of uncomplicated malaria and is recommended in guidelines for the treatment of malaria in pregnancy. A selective luteal phase defect (LPD) is associated with the risk of failure of subsequent pregnancy in the case of malaria infection. Artemether interferes with the synthesis of steroid hormones and it is unknown whether this has an influence on LPD. In this study, the effect of artemether on human luteal function was investigated with use of a luteal cell culture (LCC) system, and luteal function was also evaluated by quantifying progesterone, androgen and human chorionic gonadotropin (hCG) production in human ovarian tissue explants in vitro. Artemether inhibited progesterone and hCG secretion, but did not inhibit androgen production. In a luteinized ovary model, artemether did not influence progesterone and androgen production, but reduced the hCG production by 56% (P Q: How can I use the current time in a file's name?
